and property. Another recognizable example where

spatial optimization is essential is public transit in urban

areas. The City of Phoenix (Valley Metro 2011) has

recently added rapid bus transit and light rail lines (with

more to come), necessitating changes to support bus

route services. Utilization of transit requires good access

but also a well-performing system that moves people

from where they are to where they need to go quickly

spanning the globe and representing a diversity

tutions. As noted in Table 1, the criterion for i

is a PhD from a geography program or an appc

in a geography program. In total, there are 13

identified in Table 1, but that number does no

a subset of institutions with a significant pre

spatial optimization, including Arizona State

individuals at major research laboratories.
